Superior Clamping and Gripping

Product Information

Universal gripper PGL-plus-P 10

Flexible. Robust. Safe.

Universal Gripper PGL-plus-P

Universal 2-finger parallel gripper with a large jaw stroke, integrated sensor system and high payload due to use of a multi-tooth guidance

Field of application

Pneumatic universal gripper for handling a wide variety of workpieces in different applications. The encapsulated and sealed design makes the gripper suitable for both clean and dirty environments.

Advantages – Your benefits

Secure, certified gripping force maintenance, GripGuard Holds the gripped workpiece safely and also ensures a permanent gripping force of min. 80% in case of pressure drop. It also ensures that no dangerous, spontaneous jaw movements can occur in the event of a pressure drop.

Integrated sensor system for precise and process-reliable monitoring of the complete gripper stroke via IO-Link

Large jaw stroke enables flexible handling of a wide range of parts

Dirt protected due to IP 64 as standard and the metal-encapsulated, additionally sealed design at the base jaws

Robust interior multi-tooth guidance for high moments and use of long gripper fingers

With food-compliant lubrication as standard as a solution for an easy entry into medical technology, lab automation, pharmaceutical and food industry. The requirements of EN 1672-2:2020 are not fully met.

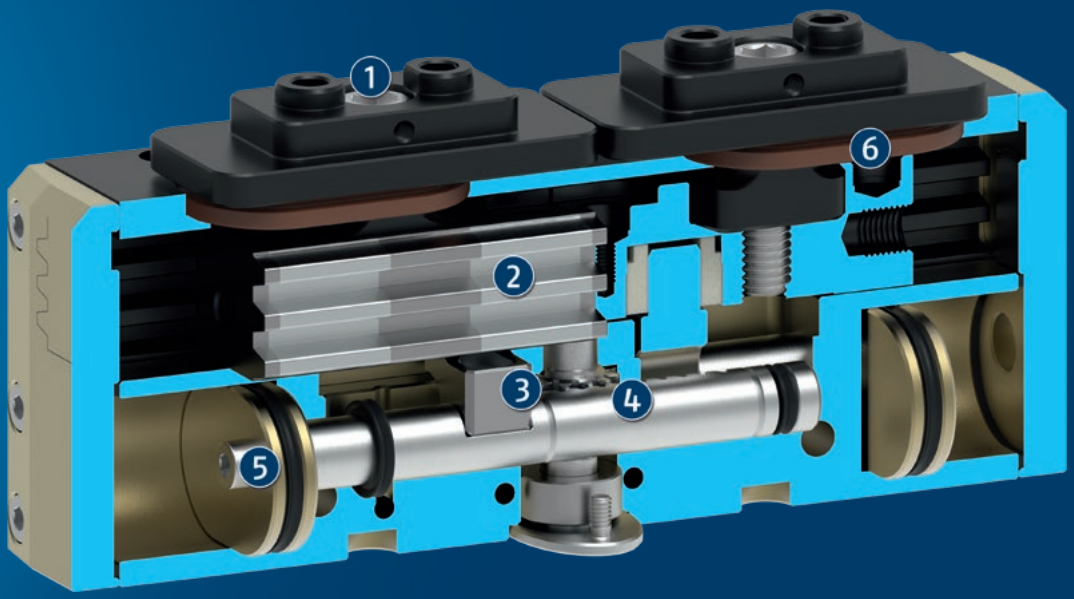
Fastening on two gripper sides in four screw directions for universal and flexible gripper assembly

Air supply via hose-free direct connection or screw connections for universal and flexible gripper assembly

Sizes	Weight	Gripping force	Stroke per jaw	Workpiece weight
Quantity: 5	0.46 .. 7.9 kg	145 .. 1900 N	10 .. 25 mm	0.72 .. 7 kg

Functional description

By applying pressure to the opposing drive pistons, the multi-tooth guided base jaws are directly driven via a drive type fastening. The jaw stroke is synchronized by means of rack-and-pinion kinematics. This ensures powerful and centric opening and closing of the gripper.



① **Base Jaw**
with standardized screw connection diagram for the connection of the workpiece-specific gripper fingers The centering sleeves are attached so that they cannot be lost when exchanging fingers

② **Multi-tooth guidance**
Maximum service life due to lubricant pockets in the robust multi-tooth guidance, and absorption of high forces and torques by means of the large guidance support

③ **driver**
Direct power transmission of the drive pistons to the gripper fingers via a robust drive type fastening

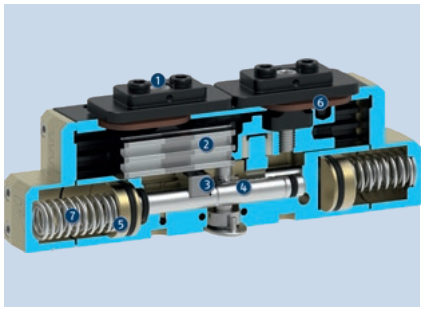
④ **Kinematics**
The gear rack-and-pinion kinematics ensure synchronization of the base jaws and centric clamping

⑤ **Pneumatic drive piston**
Maximum power generation through two oval pneumatic pistons

⑥ **Dust cover**
The entire circumference of the gripper is encapsulated with metal and additionally sealed with a lip seal at the base jaws so that it is suitable for universal use, even in dirty environments.

Detailed functional description

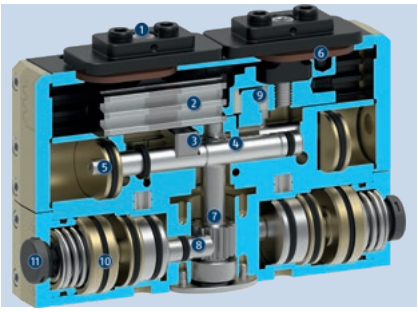
Gripping force maintenance version AS/IS



Conventional gripping force maintenance via springs also ensures a minimum gripping force in case of a pressure drop. In the AS variant this acts as a closing force, and in the IS variant as an opening force. The image shows the AS variant. The gripping force maintenance can also be used to increase the gripping force or for single actuated gripping.

1. Base Jaw
   with standardized screw connection diagram for the connection of the workpiece-specific gripper fingers The centering sleeves are attached so that they cannot be lost when exchanging fingers
2. Multi-tooth guidance
   Maximum service life due to lubricant pockets in the robust multi-tooth guidance, and absorption of high forces and torques by means of the large guidance support
3. driver
   Direct power transmission of the drive pistons to the gripper fingers via a robust drive type fastening
4. Kinematics
   The gear rack-and-pinion kinematics ensure synchronization of the base jaws and centric clamping
5. Pneumatic drive piston
   Maximum power generation through two oval pneumatic pistons
6. Dust cover
   The entire circumference of the gripper is encapsulated with metal and additionally sealed with a lip seal at the base jaws so that it is suitable for universal use, even in dirty environments.
7. Gripping force maintenance by means of a pressure spring
   Conventional gripping force maintenance via springs also ensures a minimum gripping force in case of a pressure drop. In the AS variant this acts as a closing force, and in the IS variant as an opening force. The image shows the AS variant. The gripping force maintenance can also be used to increase the gripping force or for single actuated gripping.

GripGuard: secure, certified gripping force maintenance version ASC/ISC



Secure GripGuard gripping force maintenance also ensures a permanent min. gripping force of 80%, even in case of a pressure drop. In the ASC variant this acts as a closing force, in the ISC variant as an opening force. Compared to conventional gripping force maintenance via springs, this GripGuard variant thereby ensures a significantly higher gripping force. In addition, the gripping force maintenance is constant over the entire jaw stroke. There is also no risk of injury with this gripper, as the base jaws do not move uncontrollably in the event of pressure drop. This simplifies the risk assessment, since gripping force maintenance is already certified as a safety function (PLd Cat. 3).

1. Base Jaw
2. Multi-tooth guidance
3. driver
4. Kinematics
5. Pneumatic drive piston
6. Dust cover
7. Pinion shaft
   The one-piece pinion shaft connects the pinion of the jaw synchronization with the mechanics of safe gripping force maintenance.
8. Clamping element
   In the event of a pressure drop where a workpiece is not gripped, the clamping element will prevent the pinion from rotating. This prevents any potentially dangerous movements of the gripper fingers.
9. Elastomer
   In the event of a pressure drop while gripping the workpiece, the gripping force accumulated in the elastomer (energy storage) will retain the workpiece securely. The clamping element prevents the gripper fingers from opening in such cases.
10. Spring-loaded pneumatic piston
    In normal gripper operation, the pneumatic piston is always actuated with compressed air. This does not require a separate air supply. In the event of a malfunction, i.e. a sudden pressure drop, the piston is pushed back via the spring assembly and the clamping element blocks the pinion shaft so that movement of the gripper fingers is no longer possible
11. Pressure compensating valve
    The pressure compensation valve ensures any excess pressure that has accumulated inside can escape to the outside. At the same time, it prevents dirt or liquids from entering the inside from the outside.

Certified gripping force maintenance

DGUV Test
HM 220107
Sicherheit geprüft
tested safety
dguv.de/pruefzeichen

The certificate was issued by the German Social Accident Insurance (DGUV). The DGUV test certificate confirms the secure GripGuard gripping force maintenance in case of a power failure for the gripper series PGL-plus-P in the versions ASC and ISC. The gripping systems comply with the relevant provisions of Directive 2006/42/EC (Machinery Directive). The safety function is implemented with category 3 and PLd according to EN ISO 13849-1:2015.

Integrated sensor system IOL

The gripper variant "IOL" with integrated sensor system enables precise and process-reliable monitoring of the complete gripper stroke via IO-Link. There is no longer any need for separate procurement, installation and adjustment of additional, externally mounted sensors. In addition to IO-Link standards such as temperature display and process parameters, this integrated sensor system offers two additional modes as standard that are perfectly tailored to gripping applications: Gripping Point Mode and Gripping Range Mode. Up to eight workpieces (positions or ranges) can be stored directly in the sensor profile. Tolerance and hysteresis values are already stored in the sensor profile, but can be set individually if required. However, due to the default values, this is not necessary in most cases.
In SIO mode, this gripper variant can also be used without an IO-Link master to interrogate two freely adjustable switching points. The positions "gripper open" and "gripper closed" are preset and can be individually adjusted by the customer.

External sensor system with magnetic switches

For monitoring with magnetic switches, the gripper is equipped with two sensor slots. There is a choice of different sensors: 1-point switches, 2-point switches or else compact analog sensors for mounting in the C-slot. The image shows the "gripper open" and "gripper closed" position query with two MMS 22 sensors.

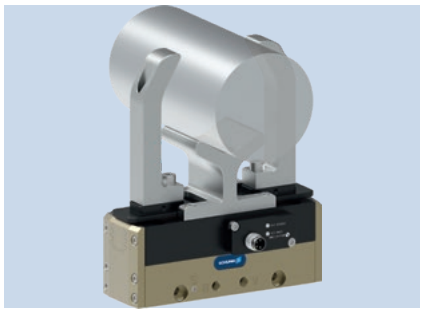
External sensor system with inductive proximity switches

The "IN" gripper variant is supplied with the pre-assembled attachment kit for two inductive proximity switches. The positions "gripper open" and "gripper closed" are preset. Proximity switches must be ordered separately and are slid into the housing as far as the stop and clamped. Both sensors can be set individually to monitor any other position such as "workpiece gripped" for example. Optionally, another attachment kit for two additional inductive proximity switches can be inserted at the back of the gripper, so that a total of four sensors can be mounted.

Precision version P

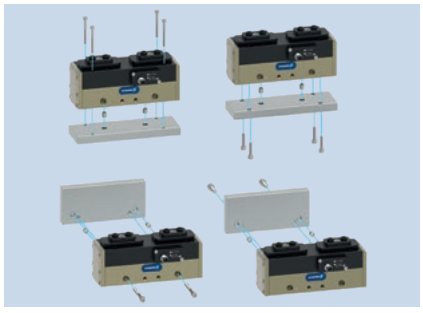
With the "P" precision version of the gripper, the base jaws are reworked on the fully assembled gripper. As a result, tolerance-related deviations can be compensated and the most precise position, form and location tolerances can be achieved. This enables highly precise gripping applications or positionally accurate change of grippers without any re-alignment.

Optional mounting options for customized add-ons



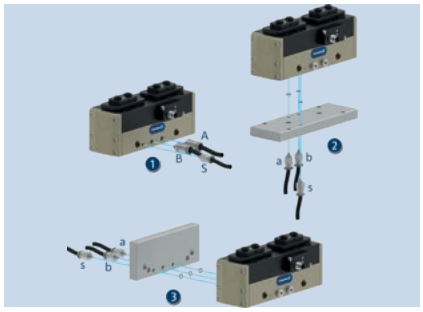
On the top of the gripper, four threads and fits are available. If required, these can be used to fasten customized designs or implement additional functions. The image shows an example of a design with additional centering or support of a workpiece.

Centering and mounting options for gripper assembly



The gripper can be installed on two sides and in four screw directions. This allows universal and flexible mounting of the gripper in all conceivable arrangements.

Pneumatic connections for the power supply



The gripper can be flexibly supplied with compressed air on three sides.

1. At the front via the main air connections A and B by means of air connections and pneumatic hoses. Air purge can be optionally created via S.
2. At the bottom via direct connections a and b, by means of tubeless direct connection and using the O-rings supplied. The pneumatic supply is then via the adapter plate. Air purge can be optionally created via s.
3. At the rear side via direct connections a and b, by means of tubeless direct connection and using the O-rings supplied. The pneumatic supply is then via the adapter plate. Air purge can be optionally created via s.

General notes about the series

Operating principle: Dual piston drive with gear rack and pinion synchronization

Housing material: Aluminum

Base jaw material: Steel

Actuation: pneumatic, with filtered compressed air as per ISO 8573-1:2010 [7:4:4].

Warranty: 36 months

Scope of delivery: Grippers in the ordered version incl. centering sleeves, O-rings for direct connection, assembly instructions (operating manual with declaration of incorporation is available online)

Gripping force maintenance device: via certified, safe gripping force maintenance version or conventionally via the variant with springs or via SDV-P pressure maintenance valve

Gripping force: is the arithmetic sum of the individual force applied to each jaw at distance P (see illustration).

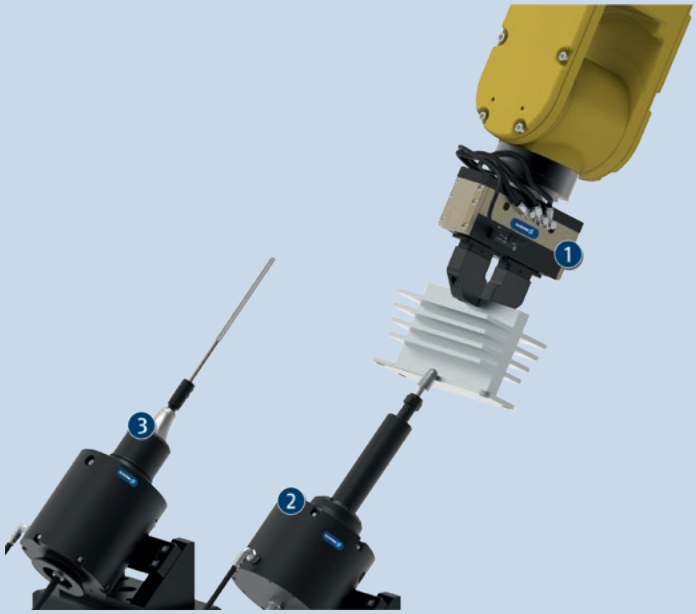
Finger length: is measured from the reference surface as the distance P in direction to the main axis.
The maximum permissible finger length applies until the nominal operating pressure is achieved. With higher pressures, the finger length must be reduced proportionally to the nominal operating pressure.

Detectable workpiece difference: specifies the smallest distinguishable difference between two gripped workpieces. The value applies at 6 bar, 23 °C, finger length at distance P and operation without air purge. Deviating parameters can influence the accuracy.

Repeat accuracy: is defined as a distribution of the end Position for 100 consecutive strokes.

Workpiece weight: is calculated for force-fit gripping with a coefficient of static friction of 0.1 and a safety factor of 2 against workpiece slippage at acceleration due to gravity g. For form-fit or capture gripping, there are significantly higher permissible workpiece weights.

Closing and opening times: are purely the times that the base jaws or fingers are in motion. Valve switching times, hose fill times, or PLC reaction times are not included, and are to be considered when cycle times are calculated.



Application example

In addition to ordinary handling processes, the robust and dirt-protected universal gripper PGL-plus-P can also be used to hold workpieces during simple machining operations. In the example shown, a workpiece is being held between the gripper fingers. A robot moves the workpiece along a stationary deburring spindle for deburring. The connected air purge prevents dirt from entering the gripper.

1. Universal Gripper PGL-plus-P
2. Deburring spindle RCV
3. Pneumatic file tool CRT

SCHUNK offers more ...

The following components make the product even more productive – the suitable addition for the highest functionality, flexibility, reliability, and controlled production.

Options and special information

Safe gripping force maintenance AS/ISC: The secure, certified GripGuard gripping force maintenance also ensures a min. gripping force of 80% even in case of a pressure drop. In the ASC variant this acts as a closing force, in the ISC variant as an opening force.
Gripping force maintenance version AS/IS: The conventional version for gripping force maintenance via springs also ensures a minimum gripping force in case of a pressure drop. In the AS variant this acts as a closing force, and in the IS variant as an opening force.
High-temperature version V: for use in hot environments
Precision version P: for the highest accuracy
Integrated sensor system IOL: The integrated sensor system enables precise and process-reliable monitoring of the complete gripper stroke via IO-Link.
External sensor system: Instead of the gripper version with integrated sensor system, conventional external sensors can also be used. Various magnetic switches and inductive proximity switches are available.
Additional versions: Various options can be combined with each other.
Integrated air purge connection: impedes the ingress of dirt into the inside of the gripper In combination with air purge, this increases the protection class from IP 64 to IP 67
With food-compliant lubrication as standard: as a solution for an easy entry into medical technology, lab automation, pharmaceutical and food industry. The requirements of EN 1672-2:2020 are not fully met.

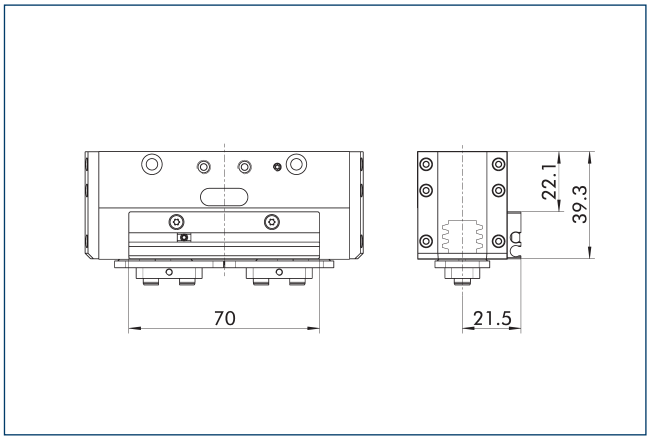
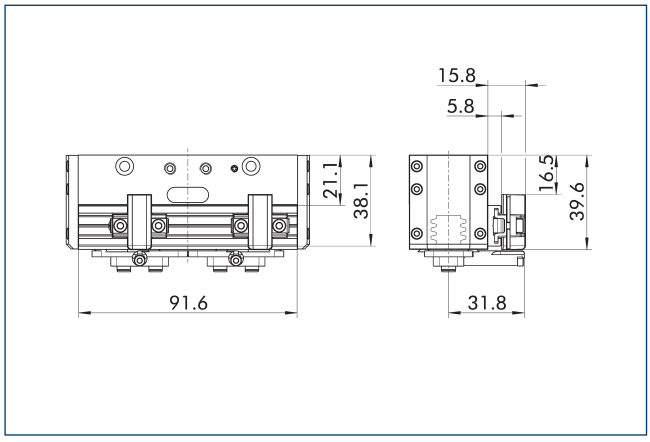
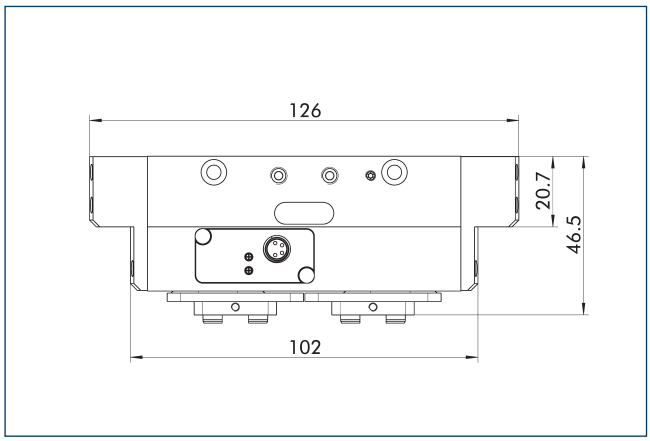
Gripper monitoring with magnetic switches



Gripper monitoring with inductive proximity switches IN

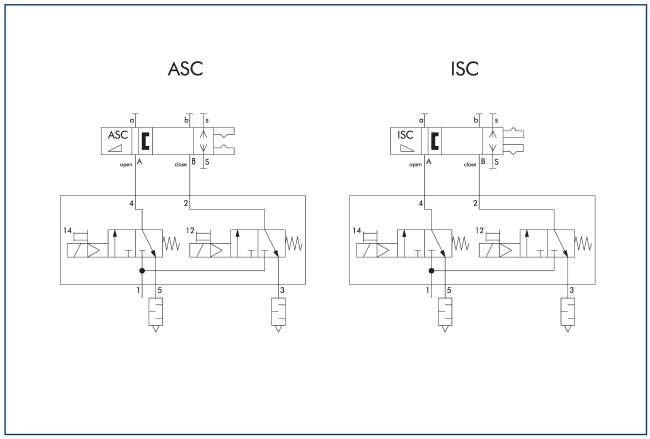


Gripping force maintenance device AS / IS



The mechanical gripping force maintenance device ensures that a minimum clamping force will be applied even if there is a drop in pressure. In the AS variant this acts as a closing force, in the IS variant as an opening force Besides this, the gripping force maintenance can be used to increase gripping force or for single actuated gripping.

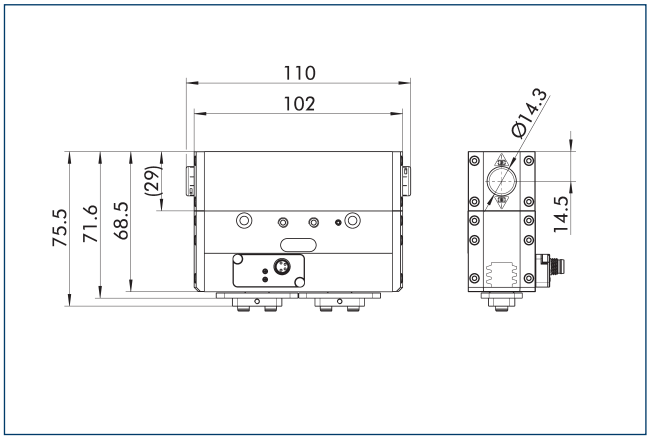
GripGuard: secure, certified gripping force maintenance ASC/ISC



Grippers with ASC or ISC gripping force maintenance are generally controlled with a 2x3/2-directional control valve.

ⓘ Be sure to observe the control sequence in the operating manual.

GripGuard: secure, certified gripping force maintenance ASC/ISC



Secure gripping force maintenance also ensures a permanent gripping force of min. 80%, even in case of a pressure drop. In the ASC variant this acts as a closing force, in the ISC variant as an opening force.

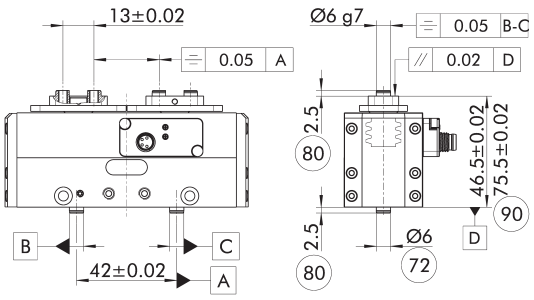
Precision version



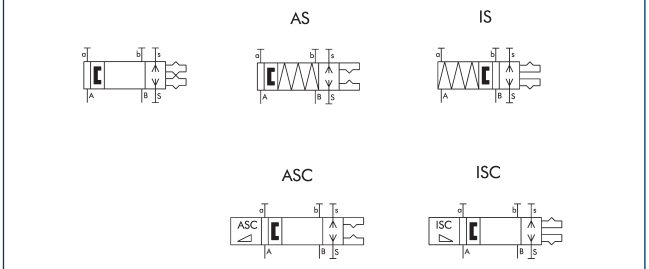
(72) Fit for centering sleeves

(80) Depth of the centering sleeve hole in the counter part

(90) For version ASC/ISC

The indicated tolerances just refer to the variants of precision versions shown in the chart of technical specifications. All other variants of precision versions are available on request.

Electronic symbol according to DIN ISO 1219



A, a Main / direct connection, gripper opening

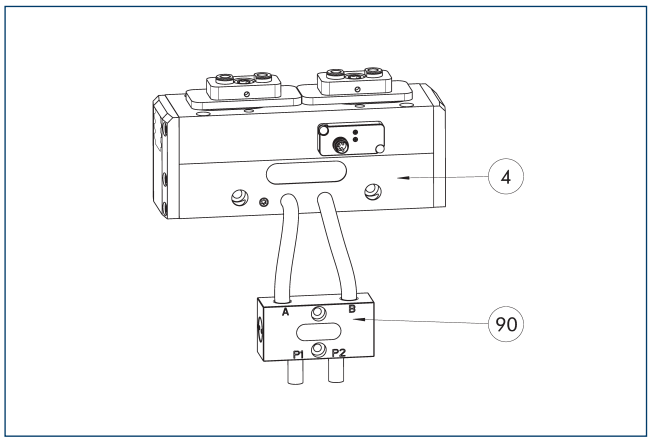
B, b Main / direct connection, gripper closing

S, s Air purge, main, direct connection

The circuit symbol shows the connection options and the function of the pneumatic gripper. "A" and "B" are the main connections of the gripper for opening and closing. "a" and "b" are optional direct connections for opening and closing without interference-prone hosing. "S" and "s" describe the optional air purge connection, which impedes the ingress of dirt into the gripper.

ⓘ SCHUNK also provides ECAD data for your design. You can choose between direct access via your EPLAN-Electric P8 software or download using the EPLAN Data Portal. Further information can be found on the SCHUNK website.

SDV-P pressure maintenance valve



(4) Grippers

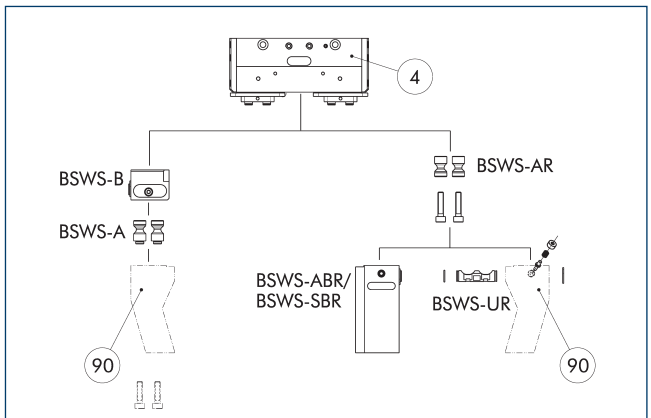
(90) SDV-P pressure maintenance valve

The SDV-P pressure maintenance valves ensure in emergency STOP situations that the pressure in the piston chamber of pneumatic gripper, swivel, linear, and quick-change modules is temporarily maintained. The pressure maintenance valve must not be used in combination with the ASC and ISC variants.

Description	ID	Recommended hose diameter
		[mm]
Pressure maintenance valve		
SDV-P 04	0403130	6
SDV-P 07	0403131	8
Pressure maintenance valve with air bleed screw		
SDV-P 04-E	0300120	6
SDV-P 07-E	0300121	8

ⓘ In order to achieve the specified closing and opening time for each gripper variant, the recommended hose diameter must be used. The direct allocation of the respective variant of the gripper for the respective SDV-P can be found at schunk.com.

BSWS jaw quick-change jaw systems



(4) Grippers

(90) Customized gripper fingers

There are various jaw quick-change systems available for the gripper. For detailed information, please refer to the corresponding product.

Description	ID	Scope of delivery
Jaw quick-change system adapter pin		
BSWS-A 64	0303022	2
BSWS-AR 10	1515447	2
Quick-change jaw system base		
BSWS-B 64	0303023	1
Jaw quick-change system finger blank		
BSWS-ABR-PGZN-plus 64	0300072	1
BSWS-SBR-PGZN-plus 64	0300082	1
Jaw quick-change system locking mechanism		
BSWS-UR 64	0302991	1

ⓘ If the operating pressure is higher than 6 bar, suitability for use beyond the application limits must be checked. Only systems that are listed in the table, can be used. In the PGL-plus-P gripper series, the use of finger blanks with jaw quick-change system results in a limitation of the closing stroke. Please check this in detail in advance using the CAD data and adjust the reworking of the fingers accordingly.

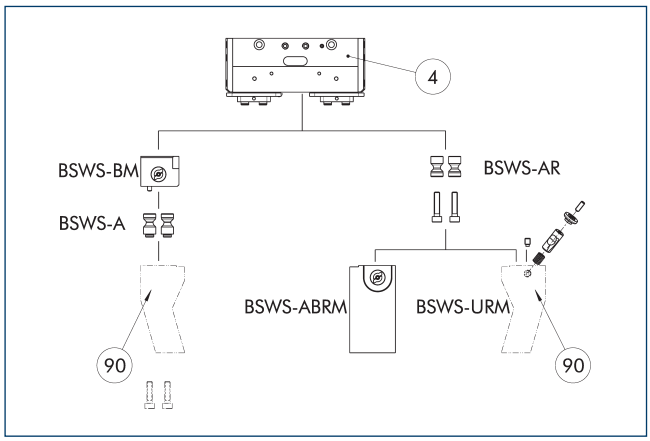
Jaw quick-change system BSWS-M



(4) Grippers

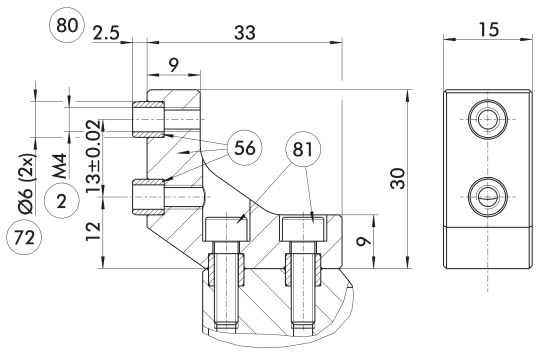
(90) Customized gripper fingers

There are various jaw quick-change systems available for the gripper. For detailed information, please refer to the corresponding product.

Description	ID	Scope of delivery
Jaw quick-change system adapter pin		
BSWS-A 64	0303022	2
BSWS-AR 10	1515447	2
Quick-change jaw system base		
BSWS-BM 64	1313900	1
Jaw quick-change system finger blank		
BSWS-ABRM-PGZN-plus 64	1420851	1
Jaw quick-change system locking mechanism		
BSWS-URM 64	1398401	1

ⓘ If the operating pressure is higher than 6 bar, suitability for use beyond the application limits must be checked. Only systems that are listed in the table, can be used. In the PGL-plus-P gripper series, the use of finger blanks with jaw quick-change system results in a limitation of the closing stroke. Please check this in detail in advance using the CAD data and adjust the reworking of the fingers accordingly.

ZBA-L-plus 64 intermediate jaws



(2) Finger connection

(56) Included in the scope of delivery

(72) Fit for centering sleeves

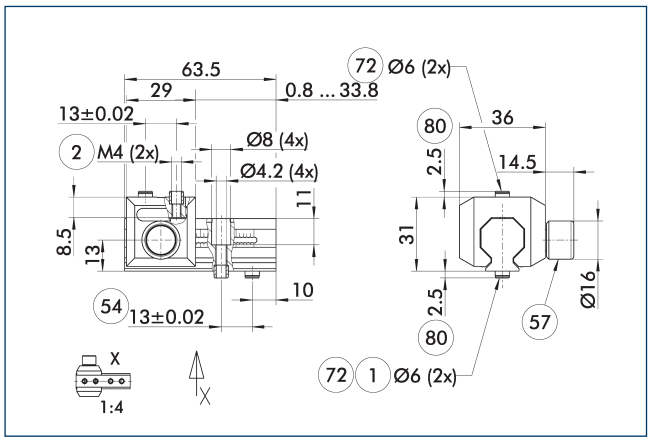
(80) Depth of the centering sleeve hole in the counter part

(81) Not included in the scope of delivery

The optional ZBA-L-plus intermediate jaws allow the screw connection diagram of the top jaws to be rotated by 90°. This makes it easier to design and produce top jaws (particularly for long versions) because no deep through-bores are required.

Description	ID	Material	Finger interface	Scope of delivery
Intermediate jaw				
ZBA-L-plus 64	0311722	Aluminum	PGN-plus 64	1

UZB 64 universal intermediate jaw



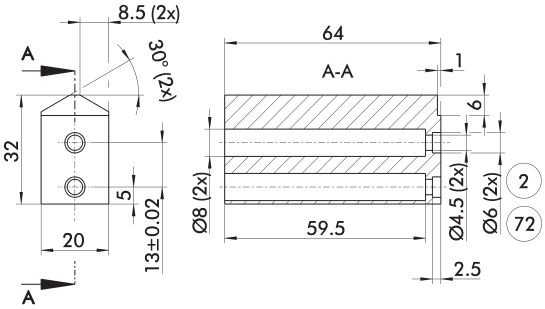
(1) Gripper connection
(2) Finger connection
(54) Optional right or left connection
(57) Locking
(72) Fit for centering sleeves
(80) Depth of the centering sleeve hole in the counter part

The drawing shows the UZB universal intermediate jaw.

Description	ID	Grid dimension
		[mm]
Universal intermediate jaw		
UZB 64	0300042	1.5
Finger blank		
ABR-PGZN-plus 64	0300010	
SBR-PGZN-plus 64	0300020	

ⓘ If the operating pressure is higher than 6 bar, suitability for use beyond the application limits must be checked.

Finger blanks ABR- / SBR-PGZN-plus 64



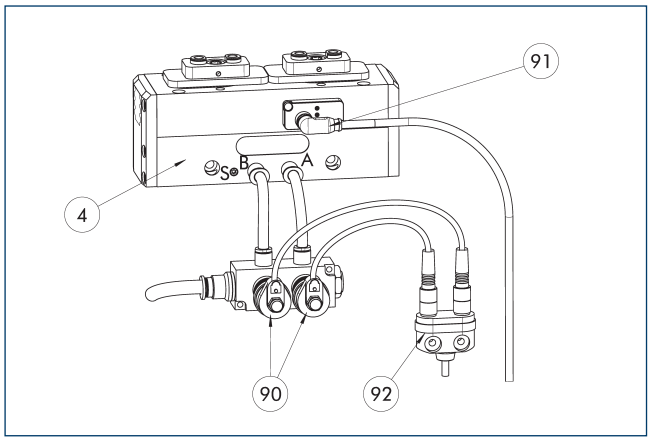
(2) Finger connection
(72) Fit for centering sleeves

The drawing shows the finger blank which can be reworked by the customer.

Description	ID	Material	Scope of delivery
Finger blank			
ABR-PGZN-plus 64	0300010	Aluminum (3.4365)	1
SBR-PGZN-plus 64	0300020	Steel (1.7131)	1

ⓘ In the PGL-plus-P gripper series, the use of finger blanks results in a limitation of the closing stroke. Please check this in detail in advance using the CAD data and adjust the reworking of the fingers accordingly.

Attachment valves



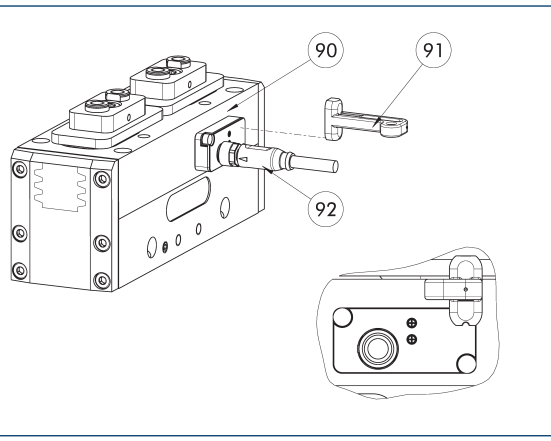
(4) Grippers
(90) Micro valves
(91) Sensor
(92) Sensor distributor

Add-on valves boost the efficiency, reduce the installation effort and air consumption but also simplify the air supply. The pressure maintenance valve must not be used in combination with the ASC and ISC variants.

Description	ID	
Add-on valve set		
ABV-MV25-S2-M5	1518373	
ABV-MV25-S2-M5-V2-M8	1518379	
ABV-MV25-S2-M5-V4-M8	1518421	

ⓘ One add-on valve set ABV is required for each unit, optionally with distributor for sensor system and valves.

Sensor Teaching Tool



(90) Gripper with integrated sensor system IOL
(91) Sensor Teaching Tool
(92) Connection cables

If the gripper with integrated sensors (PGL-plus-P...-IOL) is operated in SIO mode without an IO-Link master, a separate magnetic teaching tool will be required.

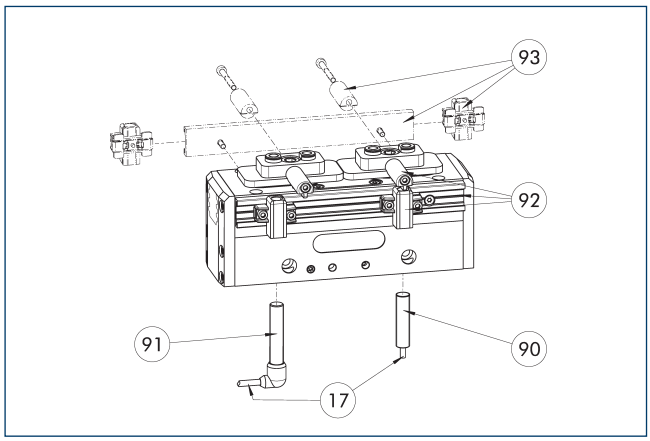
Description	ID	
Sensor Teaching Tool		
MT-MMS 22-PI	0301030	

ⓘ The magnetic teaching tool and the connection cable must be ordered as optional accessories.

PGL-plus-P 10

Universal gripper

IN 80 inductive proximity switches



(17) Cable outlet
(90) Sensor IN ...
(91) Sensor IN..-SA
(92) Attachment kit for monitoring with two inductive proximity switches
(93) Optional rear mounting of another attachment kit for two additional proximity switches

End position monitoring can be mounted with an attachment kit. Alternatively, the sensors can be directly mounted on the IN gripper variant.

Description	ID	Often combined
Attachment kit for proximity switch		
AS-IN80-PGL-plus-P 10	1499614	
Inductive proximity switches		
IN 80-0-M12	0301588	
IN 80-0-M8	0301488	
IN 80-SL-M12	0301529	
IN 80-S-M12	0301578	
IN 80-S-M8	0301478	●

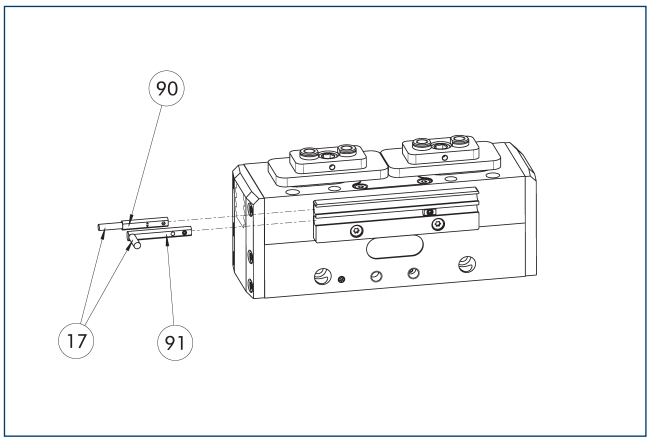
IN 80-S-M8-SA	0301483	●
INK 80-S-SA	0301566	

ⓘ Two sensors (closer/S) are required for each unit and extension cables are available as an option. This attachment kit needs to be ordered optionally as an accessory. For sensor cables, note the minimum permissible bending radii. These are generally 35 mm.

Electronic magnetic switch MMS



(17) Cable outlet
(90) Sensor MMS 22..
(91) Sensor MMS 22...-SA

End position monitoring for mounting in the C-slot.

Description	ID	Often combined

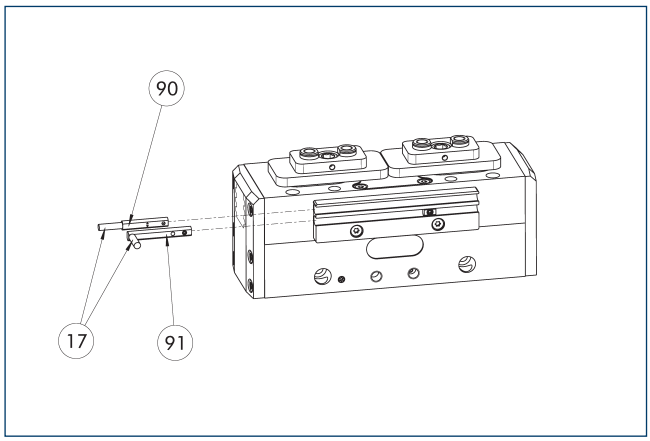
V8-M8	0301751	

ⓘ Two sensors are required per unit for monitoring two positions. On option, extension cables and sensor distributors are available. Additional product variants of the sensor, and further information and technical data can be found in the catalog chapter sensor system.

Programmable magnetic switch MMS 22-PI1



(17) Cable outlet
(91) Sensor MMS 22 ..-PI1-...-SA
(90) Sensor MMS 22 PI1-...

Position monitoring with one programmable position per sensor and integrated electronic system in the sensor. Can be programmed using MT magnetic teaching tool (included in the scope of delivery) or ST plug teaching tool (optional). End position monitoring for mounting in the C-slot. If the ST plug teaching tools are listed in the table provided, teaching is only possible with the ST teaching tools.

Description	ID	Often combined
Programmable magnetic switch		
MMS 22-PI1-S-M8-PNP	0301160	●
MMSK 22-PI1-S-PNP	0301162	
Programmable magnetic switch with lateral cable outlet

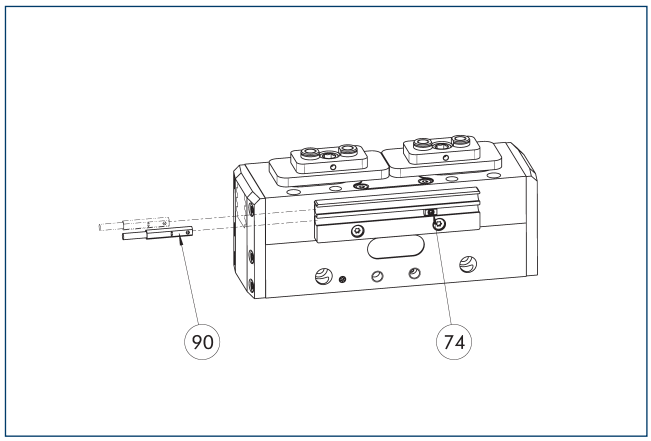
MMS 22-PI1-S-M8-PNP-HD	0301110	●
MMSK 22-PI1-S-PNP-HD	0301112	

ⓘ Two sensors are required per unit for monitoring two positions. On option, extension cables and sensor distributors are available. Additional product variants of the sensor, and further information and technical data can be found in the catalog chapter sensor system.

Programmable magnetic switch MMS 22-PI2



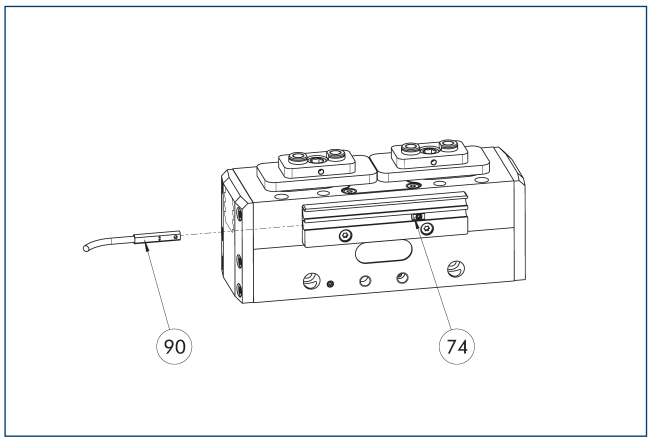
(74) Limit stop for sensor
(90) MMS 22...-PI2-... sensor

Position monitoring with two programmable positions per sensor and electronics built into the sensor. Can be programmed using MT magnetic teaching tool (included in the scope of delivery) or ST plug teaching tool (optional). End position monitoring for mounting in the C-slot. If the ST plug teaching tools are listed in the table provided, teaching is only possible with the ST teaching tools.

Description	ID	Often combined
Programmable magnetic switch		
MMS 22-PI2-S-M8-PNP	0301180	●
MMSK 22-PI2-S-PNP	0301182	
Programmable magnetic switch with lateral cable outlet		
MMS 22-PI2-S-M8-PNP-SA	0301186	●
MMSK 22-PI2-S-PNP-SA	0301188	
Programmable magnetic switch with stainless steel housing		
MMS 22-PI2-S-M8-PNP-HD	0301130	●
MMSK 22-PI2-S-PNP-HD	0301132	

ⓘ One sensor is required per unit for monitoring two positions. Extension cables and sensor distributors are optionally available. Additional product variants of the sensor, and further information and technical data can be found in the catalog chapter sensor systems.

Analog position sensor MMS-A



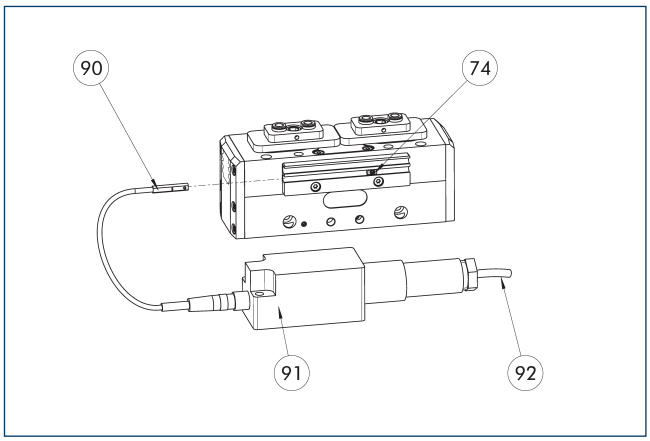
(74) Limit stop for sensor
(90) MMS 22-A-... sensor

No-contact measuring, analog multi-position monitoring for any number of positions.

Description	ID	
Analog position sensor		
MMS 22-A-10V-M08	0315825	
MMS 22-A-10V-M12	0315828	

ⓘ One sensor is required for each gripper. No additional mounting kit is required – the gripper is equipped for use of the sensor by default. Further information and technical data can be found in the catalog chapter sensor systems.

Flexible position sensor with MMS-A



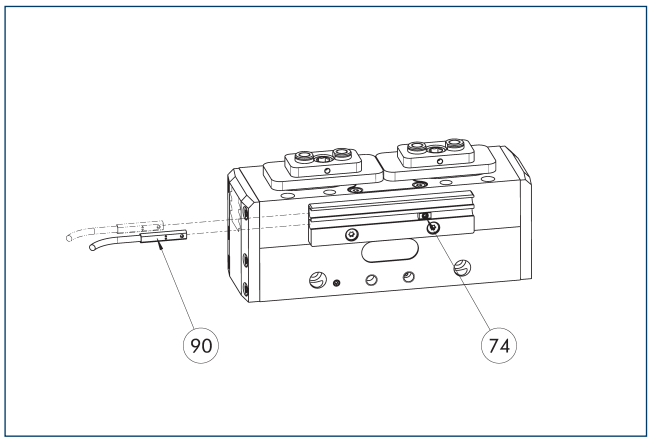
(74) Limit stop for sensor
(90) MMS 22-A-... sensor
(91) FPS-F5 evaluation electronic
(92) Connection cables

Flexible position monitoring of up to five positions.

Description	ID	
Analog position sensor		
MMS 22-A-05V-M08	0315805	
Evaluation electronics		
FPS-F5	0301805	
Connection cables		
KA BG16-L 12P-1000	0301801	

ⓘ When using an FPS system, one MMS 22-A-05V and one electronic processor (FPS-F5) are required per each gripper, as well as a mounting kit (AS), if listed. Cable extensions (KV) are optionally available – see catalog chapter "Accessories."

Programmable magnetic switch MMS-IO-Link



(74) Limit stop for sensor

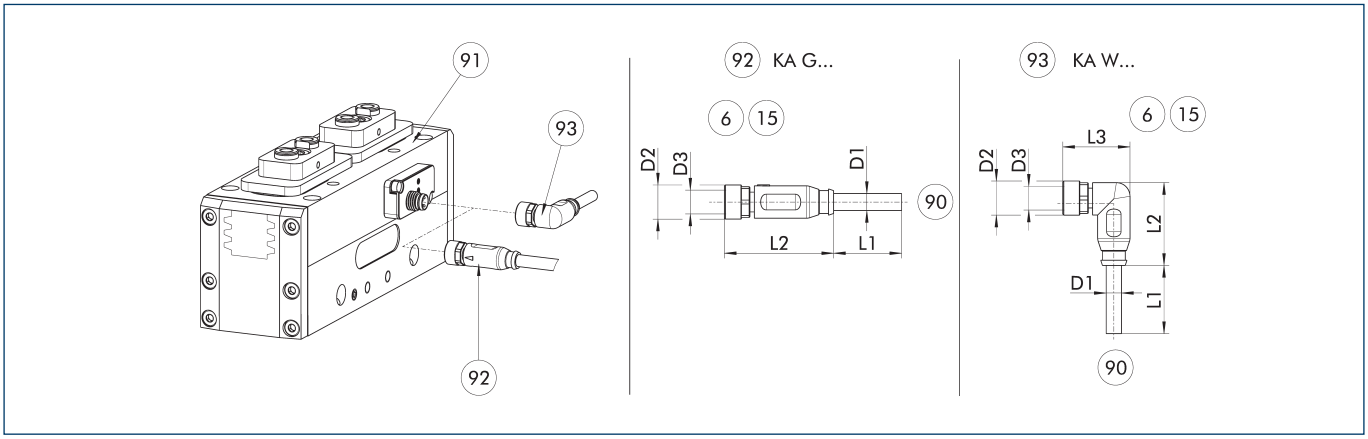
(90) Sensor MMS 22-IOL-...

Sensor for multi-position monitoring through detection of the complete gripper stroke. The sensor is mounted directly in the C-slot of the gripper. Sensor programming on the gripper takes place via the IO-Link interface or the MT magnetic teach tool (included in scope of delivery). An IO-Link master is required for operation.

Description	ID	
Programmable magnetic switch		
MMS 22-IOL-M08	0315830	
MMS 22-IOL-M12	0315835	

ⓘ One sensor is required for each gripper. No additional mounting kit is required – the gripper is equipped for use of the sensor by default. Further information and technical data can be found in the catalog chapter sensor systems.

Connection cables



KA G... Connection cable with straight socket

KA W... Connection cable with angular socket

6 Lubricating nipple connection

15 Sealing bolt

90 Cable end with straight connector

91 Gripper with integrated sensor system IOL

92 Cable with straight female connector

93 Cable with angled female connector

The connection cable is ideal for connecting the corresponding components to the controller or the power supply unit. The connection cable has a 4-pin M8 socket on one side and an open wire strand on the other side for individual connections. The connection cables are suitable for use both in the cable track as well as in torsion applications.

Description	ID	L1	D1	L2	D2	L3	D3	Often combined
		[m]	[mm]	[mm]	[mm]	[mm]

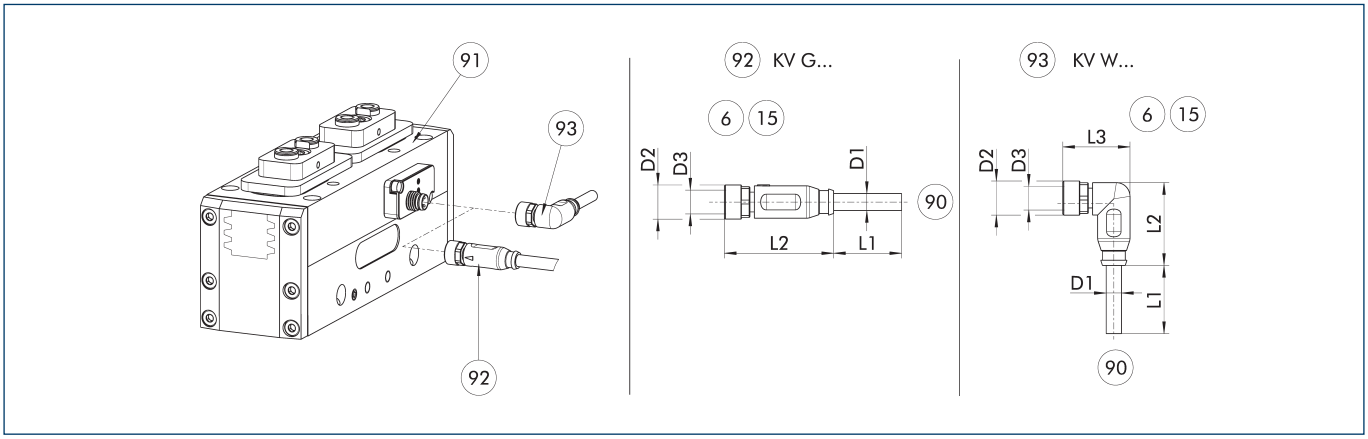
KA WLN0804-I0-02000-A	1442996	20	4.5	25	10	20	M8	

ⓘ Please observe the min. bending radius for cable track-compatible cables or the max. torsion angle for torsion-compatible cables. These are generally 10 times the cable diameter or +/- 180°/m.

Cable extension



KV G... Cable extension with straight socket
KV W... Cable extension with angled socket

6 Lubricating nipple connection
15 Sealing bolt
90 Cable end with straight connector

91 Gripper with integrated sensor system IOL
92 Cable with straight female connector
93 Cable with angled female connector

The cable extensions are ideal for connecting the relevant components to the control system, or for use as extension cables. The cable extensions have a 4-pin M8 socket with a straight or angled design on the module side and a 4-pin M12 connector with a straight design on the other side. The cable extensions are suitable for use in the drag chain and in torsion applications.
